

Aim

To develop a RAPTOR flowchart to generate the Fibonacci series up to **N terms**.

Algorithm

1. Start the program.
2. Get the value of N from the user.
3. Initialize a = 0 and b = 1.
4. Display the values of a and b.
5. Initialize i = 3.
6. Repeat the following steps while $i \leq N$:
 - Calculate $c = a + b$.
 - Display c.
 - Assign $a = b$.
 - Assign $b = c$.
 - Increment i by 1.
7. Stop the program.

Result

Thus, the RAPTOR flowchart was successfully executed to generate the Fibonacci series for the given number of terms.
