

Aim

To develop a RAPTOR flowchart to calculate the factorial of a given number using a loop.

Algorithm

1. Start the program.
2. Get the value of n from the user.
3. Initialize $\text{fact} = 1$.
4. Initialize $i = 1$.
5. Repeat the following steps while $i \leq n$:
 - Calculate $\text{fact} = \text{fact} \times i$.
 - Increment i by 1.
6. Display the factorial value.
7. Stop the program.

Result

Thus, the RAPTOR flowchart was successfully executed to calculate the factorial of the given number using a loop.
