

Aim

To develop a RAPTOR flowchart to calculate the power of a given base number using repeated multiplication.

Algorithm

1. Start the program.
2. Get the **Base** value from the user.
3. Get the **Power** value from the user.
4. Initialize result = 1.
5. Initialize i = 1.
6. Repeat the following steps while i <= power:
 - Calculate result = result × Base.
 - Increment i by 1.
7. Display the calculated result.
8. Stop the program.

Result

Thus, the RAPTOR flowchart was successfully executed to calculate the power of a given base number using a loop and repeated multiplication.
